

# Lecture Capture

At the heart of the system is an intuitive scheduling interface that provides quick and easy control of the capture process with optional live streaming capability. Upon completion, lectures are made available to students through a permission-based interface or can be added to any Learning Management System (LMS) in seconds. As a standards-based system, content can be viewed on any device across every network type.

With DEVOS you can readily reach students anywhere, at any time on any device. Students can attend class virtually through live broadcasts and later review recorded material on-demand as a study aid prior to exams.

## Features & Benefits

- Lectures can be scheduled to stream live and/or recorded for later viewing
- Synchronize up to 4 video feeds in a single player window
- Protect content with username/password access and Active Directory
- View usage statistics to determine content popularity
- Insert questions into recordings (post-production) to measure subject comprehension
