

Priority Alert
WITH DISCOVER VIDEO

Deliver Emergency Video Alerts with DEVOS

Instantly Alert Everyone with Priority Alert

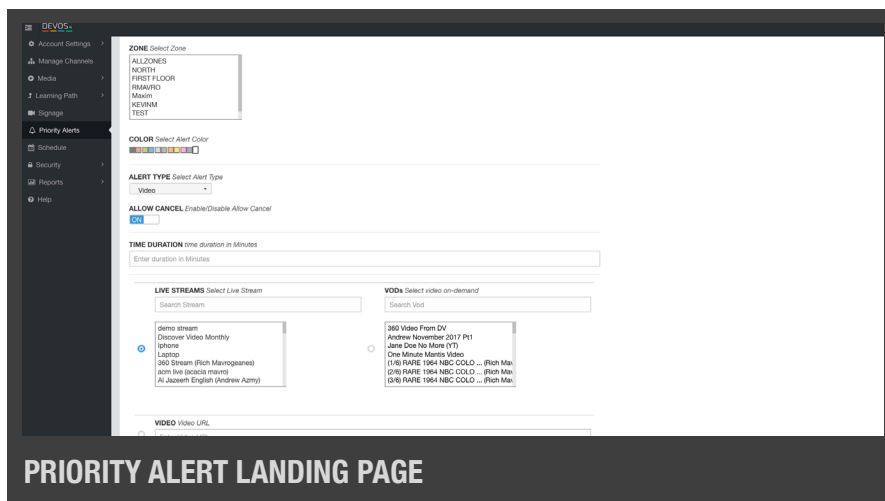

Send live and recorded video to every computer, TV, and mobile device in your organization. Integrate video messages with your existing security system.

DISCOVER PRIORITY ALERT

With the Discover video Priority Alert system you can instantaneously send out video messages to everyone in your school, company, hospital, or government agency. The critical messages can be displayed automatically on computers, TVs, and even mobile devices. Priority Alerts can be zoned so that each location or group in your organization receives alerts specific to their circumstance.

How it Works

Using the DEVOS on-premises server or cloud based system you can create multiple alerts and assign them to specific zones. For example, you can create an alert for weather, fire, lock-down, and more. A priority alert can be a live video (from an encoder), stored/recorded video, web page, or just text. You can decide if you would like the viewer to have the ability to turn it off. You can even configure the duration of the alert. Alerts can be displayed in full screen mode or a window. Next, you can add an icon to represent this specific alert.

Lastly, you have the option of sending this alert to mobile devices uses SMS. Once finalized the DEVOS system allows testing of each alert to insure they reach the correct location and group of individuals.

INTEGRATE WITH SECURITY SYSTEMS

There are a number of options for initiating the priority alerts. The most common is login into DEVOS and start a specific alert with a mouse click. An alternative is to use a panic button that connects to computer. The DEVOS system can recognize the signal from the panic button and start a pre-determined alert. If your organization has another security system the DEVOS Priority Alert can be used to enhance it. For example the priority alert notification can be connected to a device with a contact closure. If the main security system is enabled it could send a signal to the DEVOS system, and in turn deliver a video based priority alert.

Media Player & Display Options

Digital signage can be displayed using several different device types.

SignStick: Our most popular digital signage player, the SignStick is a low-cost, compact, easy to use device that plugs into any standard TV monitor via the HDMI port. Once the SignStick is plugged in, simply connect to the local Ethernet or Wi-Fi network to start streaming content from the DEVOS server for your signage display. The SignStick can play any content and does not require a continuous connection—it will continue to display the locally stored version of your signage content if the network becomes unavailable.

Smart Phones: Send SMS text message alerts with video links to any cell phone number.

Discover Video Media Player: The Media Player allows organizations to deliver full HD video signage to any TV monitor connected to the DEVOS system. Each Media Player can display unique content, allowing for an unlimited number of digital signs. Like the SignStick it can display multiple content types, but its more powerful processor enables it to play more than one video simultaneously.

Computers: Having the DiscoverVideo Priority Alert application downloaded to computers throughout your network allows you to send alerts that cannot be closed to any computer.

DEVOS Server Options

Many competitors offer video solutions that are exclusively cloud-based, but the DEVOS content management system, which serves as a live streaming server and a central storage and management hub for all captured video content, is available in several different configurations so you can choose which works best for your company.

- **On premises:** Install software on your own server or the DEVOS Rack Server-16, which supports over 2,000 simultaneous video viewers.
- **Cloud:** Fully hosted, expandable storage.
- **Hybrid:** On premises and cloud.

PRIORITY ALERT IS EASY

Priority Alert is easy to use and a quick way to send video a large group of people.

Benefits of the DEVOS Priority Alert Solution

- ✓ **Simple to Use:** With DEVOS you login as the administrator and use the Priority Alert step by step configurator to create the alerts. Every alert can have a unique name, color, and icon for easy identification.
- ✓ **Secure:** DEVOS administrator login is password protected and can work with Active Directory. In addition, a the main Super user can decide which privileges are given to each administrator.
- ✓ **Flexible:** DEVOS provides a wide variety of options for each alert. They can be live or recorded video, web page, or text. In addition, you have the option of sending them to computers, TVs, or mobile devices (or any combination).
- ✓ **Many uses in one system:** Not only can DEVOS be used for Priority Alert, but also digital signage, live TV distribution (IPTV), lecture/classroom capture, event/morning announcement delivery, and more.
- ✓ **Integrated with Digital Signage:** An advantage of using the award winning DEVOS system is that it includes both Priority Alert and Digital Signage. Just add a SignStick media player to each TV and you can send alerts to any and all TVs within your organization.
- ✓ **Tech Support:** Discover Video provides telephone & email support for your DEVOS signage system. Our team can train your employees and diagnose/fix any problems.
